

## New filling quantities

Convenient for customers, ecologically friendly

Customers rely on our claim for sustainability regarding the production of varnishes. This includes the eco-friendly distribution of our products. We have optimized the filling quantity per container. Hence, Pearltec takes another step to specifically improve the protection of climate and resources.

**The following filling quantities** for Pearltec products will be changed over the next few months. However, the measurements of the individual drums or containers stay the same.

Filling quantity per drum or container:	to date	new
	200 kg	220 kg
	600 kg	650 kg
	1.000 kg	1.050 kg

### Advantages for customers and the environment:

- **Enhanced order management:** Longer ordering cycles reduce the effort in administration and logistics.
- **Eco-friendly:** Less packaging saves resources and reduces waste.
- **CO2-reducing:** Fewer transports reduce exhaust emissions and traffic.

**Practical example:** An annual order quantity of 8,8 tons varnish is now being delivered in 40 drums à 220 kg instead of 44 drums à 200 kg. That saves the logistics effort of four drums.
